

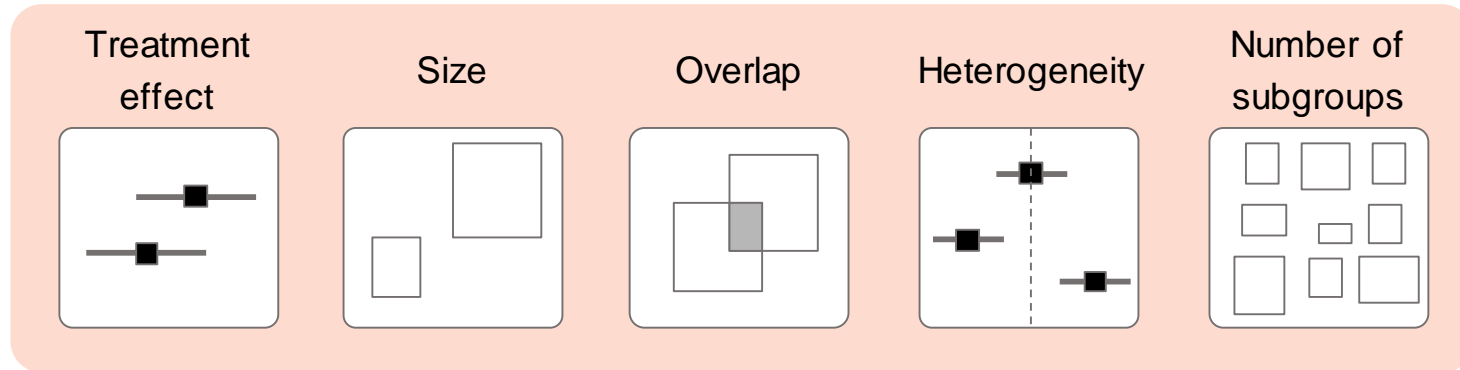

Graphical displays for subgroup analysis in clinical trials

51

Baseline characteristics may create a large number of subgroups. Graphical approaches help to understand and communicate results from subgroup analyses to a wider audience.

Objective:

- Assess existing approaches based on a set of sensible criteria.
- Develop an effective visualization approach for subgroup analysis.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under the Marie Skłodowska-Curie grant agreement No 633567.
